
Books Sales & Ratings Analysis

Web Scraping + Data Cleaning & EDA using Python + Power BI + SQL

By Vikas Prajapati

Made with GAMMA

Project Overview

Problem Statement

Analyze book dataset to understand pricing, ratings, and category trends

Key Objectives

- Identify patterns between price and rating
- Find which categories perform best

Made with GAMMA

Dataset Overview

Dataset Details

Total Records: ~1,000 books

Key Columns

- Title
- Category
- Price (€)
- Rating

Data Cleaning Process

01

Removed Missing Values

Cleaned incomplete records

02

Fixed Data Types

Standardized formats

03

Removed Duplicates

Ensured data integrity

04

Standardized Categories

Consistent naming conventions

Dashboard Overview

Interactive dashboard to explore pricing, ratings, and categories

Made with GAMMA

Key Insights

Price vs Rating Relationship

No strong correlation found between price and rating across categories

Category Performance

Novels, Erotica, and Adult Fiction show higher ratings (4.8 stars)

Pricing Variation

Significant price differences across categories (€10-€59.99)

Market Distribution

Fiction dominates with 180 books; some categories have very few entries

Made with GAMMA

Visual Analysis Highlights

Rating Distribution

Revenue fairly balanced across all ratings (1-5 stars), with no extreme dominance

Price Range

Most books clustered around €20-€40 price range with ratings 2.5-3.5

Made with GAMMA

Conclusions

Price Doesn't Drive Ratings

Higher prices don't guarantee better ratings

Category Matters

Genre significantly impacts performance

Uneven Distribution

Some categories underrepresented
